Project Title: Promoting the Implementation of Community Based Monitoring System to Local Governments in Indonesia

Administrative Information:

Project Leader: Dr. Sudarno Sumarto
Address: Jl. Pandeglang 30, Jakarta 10310, Indonesia
E-mail: smeru@smeru.or.id

I. Project Abstract

Given the relatively poor performance of the traditional poverty identification methods in Indonesia (Suryahadi & Sumarto 2001) and the fact that district governments in Indonesia now have more independence in setting their budgets, it is important that a new poverty monitoring system be developed to ensure better targeting in poverty programs and more efficient government spending.

Therefore, the purpose of the pilot project on Community Based Monitoring System (CBMS) in Indonesia is to design a new method that can accurately identify poor families. The method must have a solid methodological background, easy to be administered by locals, and adaptive to local specific poverty conditions. Furthermore, it should give speedy results and give objective results, which mean it should be relatively tamper-proof. Meanwhile, the second purpose of the pilot is to promote CBMS to local governments once it is tested on several villages in Indonesia.

II. Project objectives

The project will gather household information that is necessary in order to create a composite index that will summarize all the multidimensional aspect of poverty into a single figure. Construction of such index is the first effort to be undertaken in Indonesia. We shall use it as a tool to promote the importance of CBMS to local government officials.
